

DESCRIPTION:

Marina Unic+ is an innovative race suit. Made with a fabric developed 100% by Marina Racewear with the aim of being fire retardant, elastic and 100% customizable by sublimation. This technique allows the printing ink to adhere to the fabric and thus be able to create any type of design. In addition, it is a suit indicated for those who want to show a good image of their team, since use and washing do not affect the high definition of the logos and colours. Its RET (Textile Evaporation Resistance) value is 9.8 m²/pa/w, one point and a half lower than the market average. This makes it a garment with a great capacity to evaporate sweat.

- RET 0-6: Very good. Extremely breathable.
- RET 6-13 Good. Very breathable.
- RET 13-20 Normal. Breathable.
- RET 20-30 Poor. Barely breathable.

Suit indicated to unleash creativity without losing the comfort and safety of our FIA suits.

CHARACTERISTICS:

- Homologation: FIA 8856-2018
- Elastic and breathable race suit
- 100% customizable by sublimation
- Fabric with a high degree of definition in logos and colours
- RET breathability value: 9.8 m²/pa/w.
- Weight of 0.94kg

PROPERTIES:

- Pre-curved sleeves
- 3 capas de protección contra el fuego
- Inherent flame retardant (from the fiber)
- Antibacterial
- Extrasoft
